A monotonicity condition can hold either for all x or for x on a given interval. In the latter case, the function is said to be monotonic on this interval. For example, the function $y = x^2$ increases on the interval $[-1, 0]$ and decreases on the interval $[0, +1]$. A monotonic function is one of the simplest classes of functions and is continually encountered in mathematical analysis and the theory ...

Currently, humans are emitting around 29 billion tonnes of carbon dioxide into the atmosphere per year. Around 43% remains in the atmosphere - this is called the 'airborne fraction'. The rest is absorbed by vegetation and the oceans. While there are questions over how much the airborne fraction is increasing, it is clear that the total amount of CO₂ in the atmosphere is increasing dramatically.
